

INTRODUCCIÓN. SITUACIÓN DE PARTIDA.

La Dársena de Embarcaciones Menores cuenta, desde el año 2011, con un sistema de aparcamiento controlado. En la actualidad cuenta con tres barreras, una por zona de aparcamientos, en torno al acceso rodado a las instalaciones portuarias. El acceso se completa con una combinación central de rotonda y cambio de sentido que permite la salida de la dársena sin entrar en las zonas de aparcamientos.

El sistema de aparcamiento controlado proporciona diariamente los datos de los vehículos entrados y salidos cada hora, así como, un resumen mensual de afluencia de vehículos a la dársena deportiva.

Si bien estos datos no tienen en cuenta aquellos vehículos que entran y salen del puerto sin entrar en las zonas controladas se puede considerar que su influencia sobre el tráfico rodado no es significativa.

Para este aforo se han tomado los datos correspondientes al año 2014. Durante el año 2015 la situación en cuanto a concesiones administrativas existentes y número de atraques no ha variado respecto a 2014 por lo que se puede considerar que los datos para 2015 serán similares.

ANÁLISIS DE LOS DATOS.

Del análisis de los datos aportados se obtiene que la afluencia de vehículos a la Dársena de Embarcaciones Menores repite el mismo esquema a lo largo de todo el año salvo en Noviembre, mes en que se celebra la Regata ARC.

Así, a lo largo del año la mayor afluencia de vehículos se produce los jueves y viernes lo que, sin duda tiene que ver con los días de mayor actividad de los establecimientos de ocio y restauración. Los picos superan los 500 vehículos simultáneamente.

Es el domingo el día de menor afluencia y cuando el número de abonados supera al número de rotaciones. Es un día elegido por los propietarios de embarcaciones para el disfrute del deporte náutico. Estos días el aforo no suele superar los 200 vehículos.

Los datos anteriores nos pueden dar información acerca de las actividades que producen mayor afluencia. De esta manera son actividades mucho más atractoras las dedicadas a ocio y restauración que las destinadas a la actividad náutico-deportiva. Esta conclusión se ve reforzada al detectarse unos picos anormales de afluencia en las fechas que coinciden con fechas y eventos significativos tales como navidad, carnavales o fiestas locales.

Entre semana el número de vehículos que concurren simultáneamente en las instalaciones portuarias ronda entre las 300 y 400 unidades.

Noviembre es un mes atípico por la celebración de la Regata ARC que congrega en la dársena de embarcaciones menores cerca de 300 embarcaciones que toman provisiones para cruzar el Atlántico.

De esta forma en noviembre el mayor número de vehículos que acude a la dársena de embarcaciones menores se concentra en los días entresemana superando los 500 vehículos. Los jueves y viernes, además, se suman los vehículos que habitualmente acuden a los locales de ocio y restauración alcanzando picos de 575 vehículos simultáneamente.

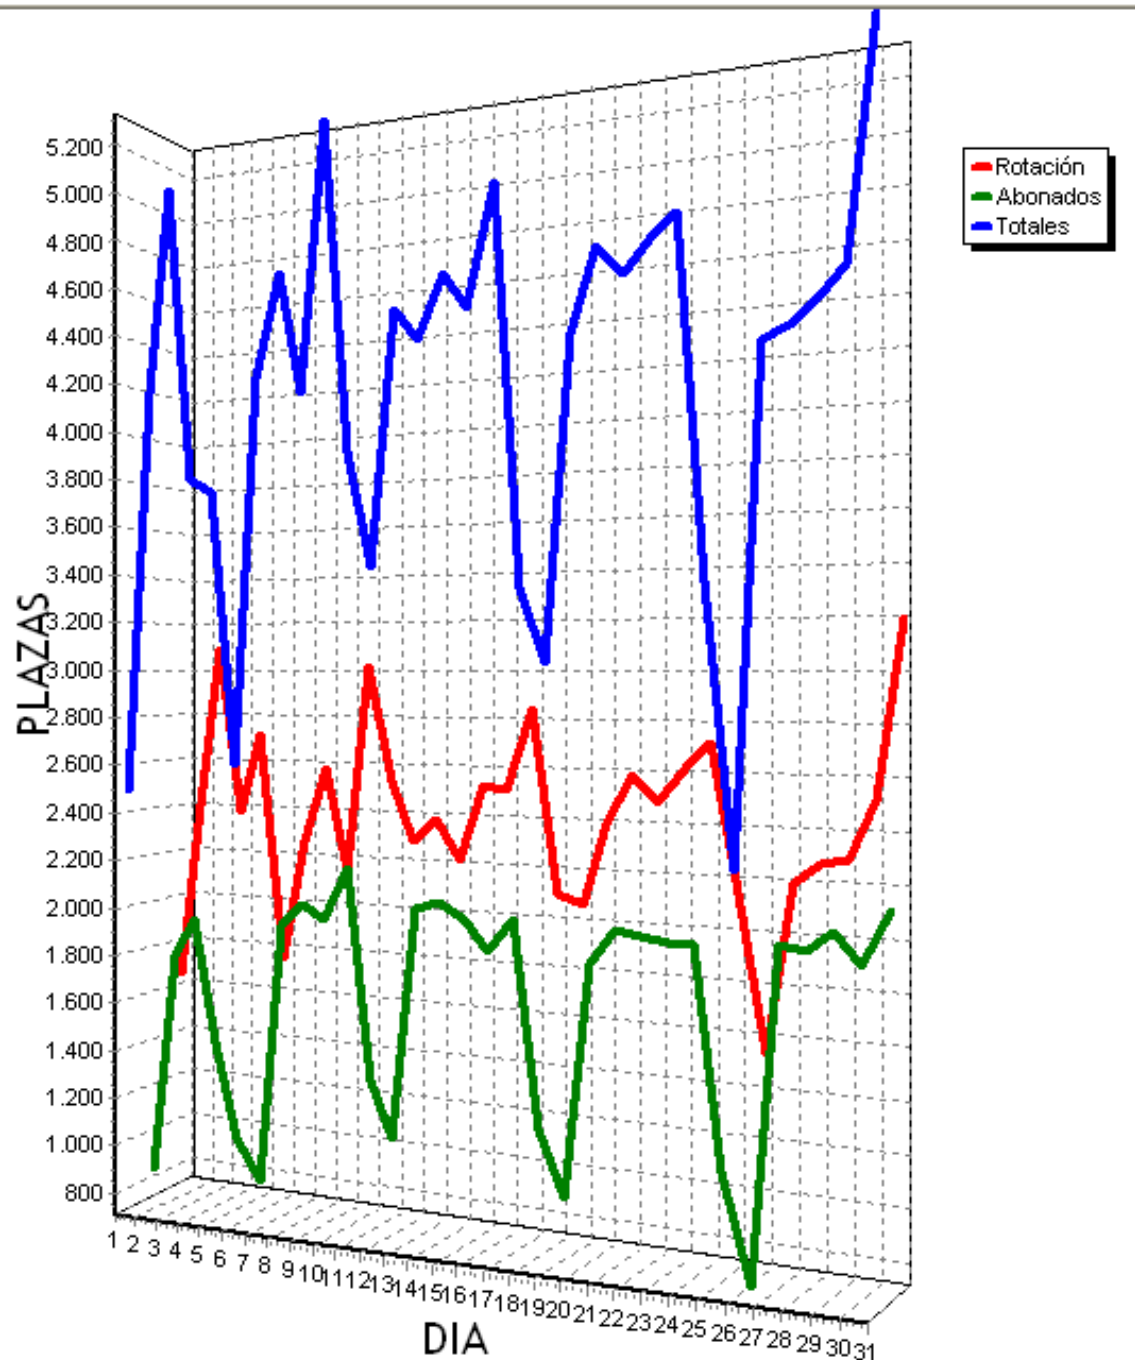

En noviembre, también los domingos cambian su tendencia anual y se convierten en días de mucha afluencia, sobre todo de visitantes atraídos por las numerosas embarcaciones, el color de las múltiples nacionalidades reunidas y los eventos organizados en torno a la Regata ARC.

La dársena de embarcaciones menores cuenta con 752 plazas de aparcamiento para turismos por lo que, normalmente, no se colmata su aforo.

Si analizamos las afluencias por horas, durante la mañana de los días laborables se produce los datos más altos mientras que en fin de semana la franja horaria se traslada hacia la tarde-noche. Los picos alcanzan también los 500 vehículos tanto entre semana como en fin de semana.

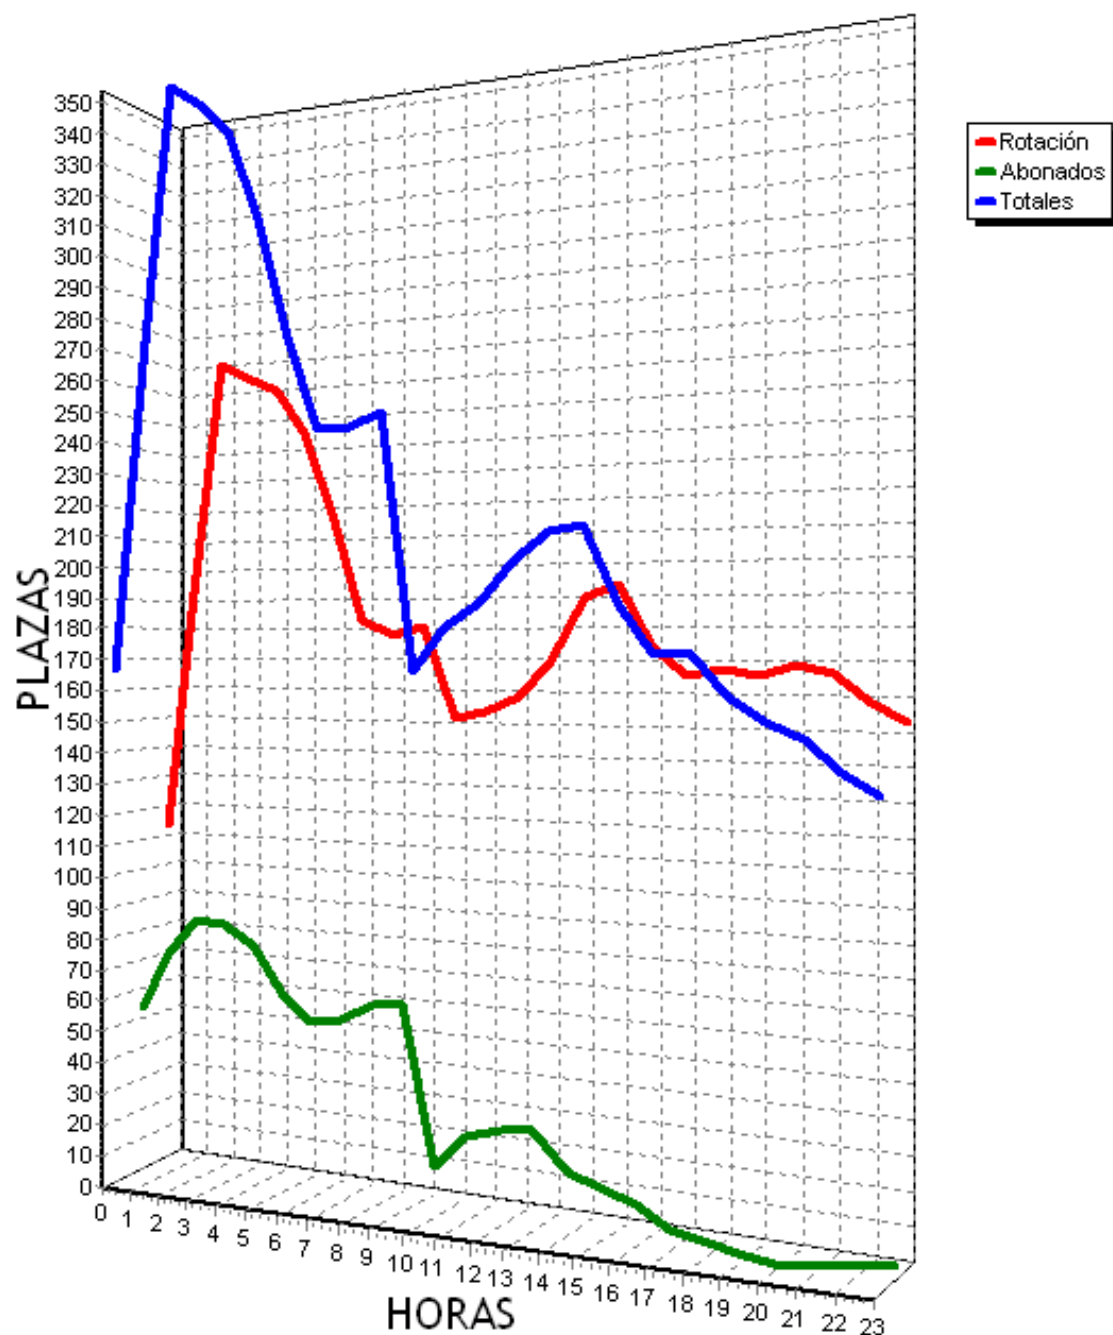

Con los datos anteriores, y teniendo en cuenta que el control con barreras de las distintas zonas de la dársena regula la cadencia del movimiento de vehículos, no se han detectado retenciones de tráfico importantes a la entrada o salida de la Dársena de Embarcaciones Menores
